Executive Summary

This report presents a passive Cyber Threat Intelligence (CTI) assessment of ZEIT / ZEIT Verlagsgruppe, with the primary focus on zeit.de. The assessment used publicly available information to examine the organisation's digital footprint, exposed infrastructure, possible phishing or impersonation activity, data-leakage indicators, and the reputation of identified infrastructure. The investigation established that ZEIT has a substantial digital footprint consisting of its primary website, subdomains, IP infrastructure, applications, newsletters, social-media presence, multimedia services and related subsidiary platforms. The source investigation reported 10 ASNs, 30 interesting URLs, 51 IP addresses and 1,540 hosts during broad passive collection, while Sublist3r identified 15 subdomains.

The most significant security-related finding concerns two publicly exposed organisational email addresses: **diezeit@zeit.de** and **digitalabo@zeit.de**. Have I Been Pwned validation indicated that **diezeit@zeit.de** appeared in 14 breaches, while **digitalabo@zeit.de** appeared in one breach. The investigation states that information associated with **diezeit@zeit.de** included email addresses, job titles, names, telephone numbers and physical addresses, with the most recent identified exposure occurring in April 2026.

By contrast, the investigation did not establish that zeit.de itself is malicious or compromised. VirusTotal reportedly returned 0/92 detections for zeit.de and identified ZEIT hosts such as abo.zeit.de and consent-cdn.zeit.de also received clean results in the investigation. The IP 151.101.1.55 was not reported as malicious by the reputation sources examined.

The phishing investigation also did not identify a confirmed external phishing domain. The query:

intitle:"zeit" inurl:login -site:zeit.de was used to identify potential login pages outside the legitimate domain, but the investigation reported no results.

Overall, the assessment indicates a low infrastructure reputation risk but a higher exposure/awareness risk associated with breached organisational email accounts. The findings should therefore be communicated to SOC and security teams primarily as awareness, monitoring and defensive intelligence rather than as evidence of an active compromise.

2. Organisation Profile

Zeit (zeit.de) is the digital publishing arm of the ZEIT Verlagsgruppe, one of Germany's most respected media organisations. It represents the online presence of *DIE ZEIT*, a leading weekly newspaper known for high-quality journalism, intellectual depth, and strong editorial independence. Zeit operates under Zeitverlag Gerd Bucerius GmbH & Co. KG, headquartered in Hamburg, and delivers a broad portfolio of digital news, analysis, multimedia content, and subscription-based premium articles. Its core mission is to shape public discourse through independent reporting, respectful debate, and forward-looking ideas. The organisation's values are independence, respect and optimism and they guide both editorial and corporate culture.

Zeit (zeit.de) is part of a wider ecosystem of subsidiaries including ZEIT Sprachen GmbH, Studio ZX GmbH, ZEIT Akademie GmbH, ZEIT Weltkunst Verlag GmbH, ZEIT CREDO GmbH, academics GmbH, ZEIT International GmbH, GoodJobs

GmbH, and e-fellows.net GmbH & Co. KG, reflecting a diversified media and education portfolio.

2.1 Organisation Overview

Zeit (zeit.de) functions as a major digital news platform offering coverage across politics, society, business, culture, science, and global affairs. It complements the print edition of DIE ZEIT with real-time reporting, multimedia storytelling, podcasts, newsletters, and interactive formats. Since its launch in 1994, Zeit.de has grown into one of Germany's largest and fastest-expanding online journalism outlets, known for analytical depth rather than breaking-news sensationalism.

The ZEIT Verlagsgruppe has a long history of innovation: the first DIE ZEIT issue appeared in 1946; ZEIT Online launched in 1994; and by 2025, the print and online editorial teams were unified under the single brand DIE ZEIT, led by editors-in-chief Giovanni di Lorenzo and Jochen Wegner.

Today, Zeit.de stands as a premium digital media organisation with a strong reputation for credibility, design excellence, and thoughtful journalism. It continues to expand through digital innovation, content diversification, and strategic investments in education, sustainability, and multimedia content creation.

2.2 Digital Footprint Summary

Zeit.de's digital footprint is large, diversified, and highly influential, spanning web, mobile, multimedia, social networks, newsletters, and partner platforms. It is one of Germany's most authoritative digital news ecosystems, supported by strong brand trust, high engagement, and a broad international audience.

Web Presence

Primary domain: zeit.de

Traffic profile: Millions of monthly users, high engagement, strong repeat readership.

Content scope: News, politics, society, business, culture, science, opinion, multimedia, premium Z+ content.

Technical footprint: Modern CMS, analytics platforms, advertising technologies, subscription systems, and user-account infrastructure.

Mobile & App Ecosystem

Mobile-optimised site with significant mobile readership.

Dedicated apps for news consumption, podcasts, and ZEIT-branded learning products.

Multimedia & Interactive Content

Extensive podcast portfolio (e.g., ZEIT Verbrechen, Was jetzt?).

Video explainers, interviews, interactive graphics, long-form digital storytelling.

Premium digital formats under ZEIT+ subscription.

Social Media Presence

Zeit.de operates active, high-visibility channels on:

Instagram, X (Twitter), Facebook, LinkedIn, YouTube

These channels amplify reporting, drive engagement, and extend reach beyond the core website.

Email & Newsletter Network

Large newsletter ecosystem covering politics, business, science, culture, careers, and curated daily briefings.

Strong subscription funnel integrated with ZEIT+.

Subsidiary & Partner Digital Assets

Zeit.de's digital footprint extends across the ZEIT Verlagsgruppe, including:

ZEIT Akademie, Studio ZX, ZEIT Sprachen, ZEIT Weltkunst, academics.de,

e-fellows.net and GoodJobs. These platforms broaden reach into education, careers, sustainability, and cultural sectors.

Search & Discoverability

Strong SEO authority due to long-standing reputation and high-quality content.

High ranking for political analysis, investigative journalism, and cultural commentary.

Audience Geography

Primarily Germany, Austria, Switzerland.

Significant international readership among German-speaking communities and global professionals.

3. Intelligence Requirements & Scope

3.1 Intelligence Objectives

3.2 Scope & Limitations

The assessment was conducted as a passive OSINT investigation. The source investigation explicitly states that publicly available information was used and that there was no attempt to gain unauthorised access or actively exploit ZEIT systems.

The assessment included:

Search-engine reconnaissance

Subdomain discovery

Passive infrastructure discovery

Public breach checking

Domain reputation checking

IP reputation checking

Historical web infrastructure

Publicly indexed documents

Phishing/impersonation searches

The assessment does not include:

Vulnerability exploitation

Password attacks

Active penetration testing

Unauthorised system access

Malware deployment

Credential validation

Social engineering

Internal network testing

A key limitation is that the absence of a finding does not prove that a threat does not exist. OSINT results represent what was publicly discoverable during the assessment.

4. Methodology & Tools Used

4.1 OSINT Methodology

The investigation followed a passive collection-and-validation process: Establish organisational scope, The primary domain and related ZEIT ecosystem were identified.

Search-engine reconnaissance: Search operators were used to locate such as: Login pages, Security-related documents, PDF files, Spreadsheets, potentially leaked information, External ZEIT-related pages.

Domain and subdomain discovery: theHarvester and Sublist3r were used to identify publicly observable infrastructure.

Infrastructure discovery: Shodan was queried using org:"Zeit" to identify internet-visible infrastructure associated with the organisation.

Threat validation: Identified indicators were checked against reputation and breach intelligence services.

Correlation: Indicators were compared across VirusTotal, AbuseIPDB, URLScan/PhishTank, WHOIS and Have I Been Pwned.

Risk assessment: Indicators were assigned confidence and recommended actions according to the investigation's evidence.

4.2 Tools Utilised

Search engines were used for the discovery of indexed information

Login pages, PDFs, spreadsheets, public references and the evidence obtained are login pages, PDFs, spreadsheets, public references.

theHarvester was used for Passive infrastructure and email discovery and evidence obtained were ASNs, IPs, URLs, hosts and email information.

Sublist3r was used for Subdomain enumeration and evidence obtained 15 subdomains.

Shodan is the Internet-facing infrastructure discovery used for Organisation associated infrastructure.

VirusTotal was used for domain/host reputation to detect results.

AbuseIPDB was used to search for IP reputation to obtain abuse reports.

Have I been Pwned was used to breach exposure validation to obtain email breach history.

URLScan was used for URL/web validation to obtain public scan information.

PhishTank was used to validate phishing to obtain phishing evidence.

WHOIS was used to obtain domain metadata, and Web archives were used for historical infrastructure to obtain historical ZEIT web and assets. The investigation also used OSINT Framework, Exploit-DB's Google Hacking Database and MXToolbox as supporting resources.

5. OSINT Collection Summary

The passive collection produced a relatively broad infrastructure picture.

theHarvester reportedly identified:

10 ASNs

30 interesting URLs

51 IP addresses

1,540 hosts

A subsequent Sublist3r investigation identified 15 subdomains.

The investigation also searched for potential phishing pages using: `intitle:"zeit" inurl:login -site:zeit.de` and no results were reported.

Searches were also performed for:

`filetype:pdf "zeit" "security"`

`filetype:pdf "zeit.de" "security"`

`site:pastebin.com "zeit.de"`

`intext:"zeit" filetype:xls OR filetype:csv`

These searches were designed to identify publicly indexed security documents and potential data leak indicators.

6. Key Findings & Exposures

6.1 Phishing & Brand Impersonation

Finding: The investigation specifically attempted to identify external ZEIT related phishing login pages. The query:

`intitle:"zeit" inurl:login -site:zeit.de` returned no results according to the source material.

Assessment: No confirmed phishing or impersonation domain was identified in the supplied investigation.

Therefore, it would be inappropriate to classify any domain as a confirmed malicious ZEIT impersonator based on this evidence alone. However, the lack of identified phishing infrastructure should not be interpreted as proof that no impersonation exists. Search engines may not index newly created phishing pages, pages may be removed rapidly, and threat actors may use alternative delivery mechanisms.

Risk: Current evidence-based risk: Low / Unconfirmed. The principal concern is the potential use of ZEIT's trusted brand in future phishing or social-engineering campaigns.

6.2 Infrastructure Exposure

The assessment identified multiple publicly visible infrastructure elements.

The source report records the following indicators:

Indicator	Type	Virus Total	AbuseIP DB	URLscan/ Phishtank	WHO IS	Have I been pwned	Assessment
Zeit.de	Domain	0/92	none	none	none		Low concern
151.101.1.55	IP	NA	none	none			No IP abuse, low concern
abo.zeit.de	Host	0/91	none	none	none		Low concern
verlag.zeit.de	Host		none	none			Low concern
consent-cdn.zeit.de	Host	0/91	none	none			Low concern
diezeit@zeit.de	Email					14	
digitalabo@zeit.de	Email					1	

The investigation's validation table above records zeit.de as 0/92 on VirusTotal and abo.zeit.de and consent-cdn.zeit.de as 0/91. It also records no AbuseIPDB, URLScan or PhishTank findings for these indicators.

Suspicious domains or IP addresses: No domain or IP can confidently be classified as malicious or suspicious.

151.101.1.55 was recorded as an identified ZEIT related IP, but its evidence-based confidence was low and the recommended action was "No action."

6.3 Data Leakage Indicators

Two ZEIT-related email addresses were identified:

diezeit@zeit.de
digitalabo@zeit.de

Have I Been Pwned was accessed to validate whether these addresses appeared in known breaches.

diezeit@zeit.de

The investigation reports:

Appearance in 14 data breaches
Initial compromise involving email addresses and passwords in August 2017.
More recent exposure in April 2026.
Exposed information reportedly included email address, job title, name, phone number and physical address.

I have assigned this report as High confidence with recommendation action to flag it for awareness rather than treating it as proof of current compromise.

digitalabo@zeit.de

The investigation reports that this email address appeared in one breach, dated February 2020.

Security significance

These findings can facilitate:

- Spear-phishing
- Business email compromise attempts
- Password-spraying campaigns
- Social engineering
- Identity impersonation
- Fraudulent subscription/customer-service communications

However, a breach occurrence does not by itself demonstrate that the current account remains compromised.

7. Threat Analysis & Risk Assessment

7.1 Threat Actor Perspective

As a threat actor, examining ZEIT's public footprint could potentially combine several categories of information.

A. Reconnaissance

The actor can discover: Primary domains, Subdomains, IP addresses, public email addresses, corporate roles, subsidiaries, public-facing services. The investigation demonstrates that substantial infrastructure information is publicly discoverable.

B. Target Selection

Breached organisational email addresses provide additional context for targeting.

For instance, an attacker could use a known ZEIT email address together with the associated job title or organisational information to make a phishing message appear more legitimate.

C. Social Engineering

The ZEIT brand is particularly suitable for social engineering because it is a well-known media organisation with:

- A large audience

- Subscription services

Newsletters

Digital accounts

Public-facing communications

Strong brand recognition

An attacker could potentially impersonate customer support, subscription, editorial or administrative functions.

D. Credential Theft

Although the investigation found no confirmed phishing page, the existence of breached email information creates a risk that future campaigns could use ZEIT branding and previously exposed information to increase credibility.

7.2 Business Risk Impact

Risk Assessment:

Risk	Likelihood	Potential impact	Assessment
Phishing	Medium	High	Monitor proactively
Brand impersonation	Medium	Medium	Continue to monitor
Breached corporate email information	High evidence	Medium and high	Awareness and monitoring are required.
Infrastructure exposure	High	Medium	Maintain asset inventory
Malicious ZEIT infrastructure	Low evidence	High if confirmed	No current confirmation.
Public information enabling social engineering.	Medium	High	Reduce unnecessary exposure
Account takeover through reused credentials	Possible	High	Prevent through MFA or password controls.

The highest-confidence finding is the historical breach exposure of organisational email addresses. The infrastructure indicators themselves were assessed as low confidence for maliciousness.

8. Evidence Log

#	Indicator	Type	Source	Result	Status
1	Zeit.de	domain	Virustotal	0/92 detections	Low risk
2	151.101.1.55	IP	AbuseIPDB	No negative result reported	Low
3	Abo.zeit.de	host	Virustotal	0/91	Low
4	Consent-cdn.zeit.de	host	Virustotal	0/91	Low
5	Verlag.zeit.de	host		No negative result	Low
6	Diezeit@zeit.de	email	Have I been Pwned	14 breaches	High
7	digitalabo@zeit.de	email	Have I been Pwned	1 breach	Medium
8	Zeit login query search	Search engine		No results reported	Low
9	ZEIT infrastructure		theHarvester	10 ASNs, 51 Ips, 1540 hosts	
10	ZEIT subdomains		Sublist3r	15 subdomains	
11	ZEIT infrastructure		Shodan	Organisation based infrastructure discovery	

9. Mitigation & Recommendations

ZEIT should maintain continuous monitoring for: Newly registered look-alike domains, typosquatting, fake ZEIT login pages, fake subscription pages, fake recruitment websites, and fraudulent social-media accounts.

A single manual search provides only a point-in-time assessment.

Protect Breached Email Accounts: The two identified email addresses should be treated as exposed intelligence.

Recommended actions include: Confirm whether the addresses remain active, verify that historical passwords are no longer in use, enforce strong authentication, use phishing-resistant MFA where feasible, monitor authentication logs for anomalous activity, monitor for credential reuse and educate users about targeted phishing.

Improve External Attack-Surface Management: Maintain an authoritative inventory of domains, subdomains, IP ranges, Cloud services, SaaS applications, third-party services and Subsidiary infrastructure. The discovery of 1,540 hosts in the broad passive sweep demonstrates why continuous asset inventory is important.

Establish IOC Monitoring: The SOC should monitor the identified indicators and any future related indicators through SIEM, EDR, DNS monitoring, Email security controls, Threat-intelligence platforms, Brand-monitoring services.

Improve Email Security: Recommended controls include SPF, DKIM, DMARC, Strong DMARC enforcement, Anti-phishing controls, External sender warnings and user reporting mechanisms.

Continuous Threat Intelligence: The investigation should be repeated periodically rather than treated as a one-time assessment.

A useful monitoring cycle would include domain monitoring, subdomain discovery, breach monitoring, phishing monitoring, IP reputation monitoring, threat-actor reporting, and social-media impersonation monitoring.

10. Conclusion

This passive OSINT assessment demonstrates that ZEIT has a large and publicly discoverable digital footprint. Numerous hosts, IP addresses, URLs, ASNs and subdomains can be identified through public sources. The assessment did not identify a confirmed malicious ZEIT impersonation domain. The external phishing search

returned no results, and the investigated ZEIT domains and hosts received clean reputation results from the sources recorded in the assessment.

The principal security concern is instead data exposure associated with organisational email addresses. **diezeit@zeit.de** was reported in 14 breaches, while **digitalabo@zeit.de** was reported in one. The information associated with **diezeit@zeit.de** included personally identifying and professional information, making it potentially useful to threat actors conducting targeted social engineering. The investigation therefore supports a risk posture of:

Infrastructure reputation: Low concern.

Confirmed impersonation: Not identified.

Data-exposure concern: Significant.

Social-engineering risk: Moderate.

Evidence of active compromise: Not established.

The most appropriate defensive response is continuous monitoring, account protection, breach-awareness measures, external attack-surface management and rapid validation of future suspicious domains or infrastructure.

11. Ethical Considerations & Disclaimer

When carrying out the passive OSINT investigation of ZEIT.DE, I considered the ethical implications of collecting information about a real organisation. I limited my investigation to information that was publicly available through sources such as search engines, Shodan, VirusTotal, Have I Been Pwned and web archives. I did not attempt to gain unauthorised access to ZEIT systems or actively exploit any vulnerabilities.

Another ethical consideration was staying within an appropriate scope. Finding subdomains, hosts or historical information does not mean that I had permission to test or attack those systems.

In conclusion, my approach was to collect only relevant information, minimise potential harm, respect privacy, avoid unauthorised interaction with systems, and report findings accurately and responsibly. This helped ensure that the passive OSINT

investigation was conducted for defensive threat-intelligence purposes rather than exploitation.

This report is an academic project CTI assessment and should not be interpreted as evidence that ZEIT systems are compromised or vulnerable.

Email Breach History

Timeline of data breaches affecting your email address

14

Data Breaches

Oh no — pwned! This email address has been found in multiple data breaches. Review the details below to see where your data was exposed.

Stay Protected

Pitney Bowes

In April 2026, the hacking collective [ShinyHunters](#) claimed to have obtained data from Pitney Bowes as part of a broader extortion campaign that also named several other organisations. After negotiations allegedly failed, the group publicly released the data which included 8.2M unique email addresses, along with names, phone numbers and physical addresses. A subset of the data also included Pitney Bowes employee records with job titles.

Compromised data:

- Email addresses
- Job titles
- Names
- Phone numbers
- Physical addresses

Apr 2026

Aug 2017

Onliner Spambot

In August 2017, a spambot by the name of [Onliner Spambot](#) was identified by security researcher Benkow [мoкyтq](#). The malicious software contained a server-based component located on an IP address in the Netherlands which exposed a large number of files containing personal information. In total, there were 711 million unique email addresses, many of which were also accompanied by corresponding passwords. A full write-up on what data was found is in the blog post titled [Inside the Massive 711 Million Record Onliner Spambot Dump](#).

Compromised data:

- Email addresses
- Passwords

14. Analytical Questions

What intelligence requirements should be defined before collecting data?

The investigation should begin with these requirements such as: ZEIT brand impersonation and phishing, publicly exposed domains, subdomains, hosts and IP addresses, breached corporate email accounts and other data leak indicators, reputation of discovered infrastructure, publicly exposed or attacker-controlled infrastructure, potential threat actors and their activity, and MITRE ATTACK techniques associated with confirmed threat activity.

These requirements ensure that collection is intelligence-led rather than simply gathering large volumes of OSINT.

2. Which OSINT sources provide the most valuable threat intelligence?

All tools used are the most valuable, and the strongest intelligence is from correlating multiple sources, rather than treating one database as authoritative.

3. Which domains or IP addresses appear suspicious?

No confirmed malicious domain or IP was identified.

4. How can infrastructure reputation be validated? It can be validated through multiple independent sources such as Virustotal, Shodan, URLScan, AbuseIPDB and all other tools mentioned. An indicator should not be classified as malicious simply because it appears in one source. Reputation should be correlated across several sources.

5. What attacker infrastructure is publicly exposed? No confirmed attacker-controlled infrastructure was identified in the supplied evidence.

6. How should intelligence findings be communicated to SOC analysts?

Findings should be communicated as concise, actionable intelligence rather than raw OSINT output.

7. Which MITRE ATTACK techniques are observed?

No attacker MITRE ATTACK techniques can be confidently confirmed from the supplied evidence.
